- **Organization:** The organization your license is registered to.
- **Email:** The email address associated with your license.
- **Type:** The type of license you have, Enterprise or Home.

3 Click **Details**. The details of your license are displayed.

- **Expiration Date:** The date your license expires.
- **Number of Seats:** The number of seats available for this license.
- **Enabled Features:** The components that are active in your license.
- **Disabled Features:** The components that are *not* active in your license.

Note: If you do not authorize your copy of PGP Desktop, only limited features are available to you (PGP Zip and Keys).

Authorizing PGP Desktop or Mac OS X

If you need to change to a new license number, or if you skipped the license authorization process during configuration, follow these instructions to authorize your software.

Note: Make sure your Internet connection is active before proceeding. If you have no Internet connection, you must submit a request for a manual authorization.

► Before you begin

If you purchased PGP Desktop, you received an email order confirmation with an attached PDF file.

- 1 Make a note of the name, organization, and license number you received in the email order confirmation. These are shown in the section titled **Important Note** in the PDF. You will need these details during the licensing process.

During configuration of your PGP Desktop software, you must type the name, organization, email address, and license number to authorize your copy of PGP Desktop with PGP Corporation's authorization server.

Without a solid support system a product is what you get at face value and just that.. Once you've completed their upgrade you can re-encrypt the hard disk again either using the same passphrase or a new one.. In the case of PGP WDE / Desktop Professional there is a rich user support forum and knowledge base and it's Bronze support where you have access to PGP Support Engineers and the PGP Support portal.

In some cases you'd want to use PGP Virtual Disk or PGP Zip depending on the portability you are looking for.. From the optional little lock on the menu bar that gives you access to the PGP Desktop application and WDE feature to the contextual services the GUI is very sensible, uniform and intuitive to what Mac users are accustomed to.. Once it is complete when you restart your system you are prompted with a PGP branded login called PGP BootGuard.. To send signed messages, you must have a personal certificate in your keychain To send encrypted messages, the recipient's certificate must be in your keychain.

It's PGP Perpetual Licensing entitles you to use the software indefinitely plus receive all upgrades and updates during the support period; which is renewable.. Apart from the background encryption process it couldn't get any simpler Boot Camp There are all types of Mac users out there.. In either case you want to make sure your data is safe and secure at all times One caveat of an encrypted hard disk is that if something goes wrong with the disk and it becomes unbootable you can say goodbye to your data that hasn't been backed up on an external disk.. The point your system would be most vulnerable would be when it is unencrypted so if you leave your Macbook laying around make sure you lock the screen either manually or by setting a screensaver that requires your login credentials to gain access to your desktop.

4, nor will it be updated to support this, or any future release of Macintosh OS X.. PGP 8 x is supported by Macintosh 10 2 1 - 10 3 9 Losing your encrypted Macbook means just losing 3 grand.. 5/5 – [ease of use] After registering, downloading and installing the product you are a few clicks away from being fully encrypted.. With constant reminders in the news about crimes committed with identity theft and data loss it is really amazing that everyone isn't using Whole Disk Encryption.. Visually you can plainly see the two examples above differ drastically; why not choose the less chaotic one? Making the smart choice now means not worrying about it when it happens – because it will happen – to you.

This means that the Mac's hard disk is partitioned to where Snow Leopard is loaded in one partition and Windows is loaded on another partition.. Losing your Macbook nowadays means a lot more than just losing 3 grand It means calling a lot of people to cancel credit cards and bank accounts, online accounts like eBay, PayPal and Facebook and hoping that any movies or pictures you had saved on your Macbook aren't viewed and posted online.. For example a 500GB external firewire 800 disk took only 11 hours Remember secure passphrases are no longer about mind-bending complexity as once thought.. You'd want to make sure you at least had the same protection and with PGP WDE you can follow up with the same protection your Macbook offers.. Entering your established and unique passphrase will decrypt the disk while you use it; transparently.. You then has a choice which partition (hence operating system) you want to load at any given time.. Send digitally signed and encrypted emails A digitally signed message lets your recipients verify your identity as the sender; an encrypted message offers an even higher level of security.. Naturally you'd want your "security bubble" to not only encompass your Macbook but also when someone breaks into your home steals your external backup firewire disk. e10c415e6f
